Code Review Suggestions:

Issue	How We Responded	Code Reference
Database connection limit not set	Specified a maximum connection limit of 20 in db.js	Definition of *connection* variable in db.js
README instructions need more clarification - some teams ran into issues building	Fixed build and run instructions	README file
Database credentials in main branch	Dumped old database, created new credentials, removed credentials from source code	Definition of *connection* variable in db.js Checking of .env file by server.js
Assign keys to mapped object	Added a key attribute every time a map function is used to create elements	client/src/views/Search.jsx Map function changed in lines 163 and 178.
Removed unused variables warned by ESLint when running client.	Removed the variables from the source code that weren't used.	Jsx files inside the client directory.
Additional comments required for confusing functions	Added comments when necessary to the main repo to explain code	All files
'api' string not needed in API routes	No change due to stylistic preferences	Files in routes directory

General changes made since code review:

Issue	How We Responded	Code Reference
No error handling for sign up forms.	Used formik to perform error handling for valid email and password.	client/src/components/Forms/ SignUpForm.jsx
Some of the pages relied on mock data	We un-hardcoded many fields after receiving more client data	client/src/views: AboutUs Home Search
